2 Tenprint Cards (“TwoInch” Data)

2.1 Segmentation Timing

All algorithms are run over a small fixed corpus of TwoInch images to estimate the total runtime of the evaluation. To be evaluated under SlapSeg III, algorithms **must** segment the timing corpus, on average, in under 1 500 milliseconds. This maximum reference time is documented in the SlapSeg III test plan, and is subject to change. Times are measured by running a single process on an isolated compute node equipped with an Intel Gold 6254 CPU (submissions received prior to February 2022 were timed with a Intel Xeon E5-4650 CPU).*=

Box plots of segmentation times are separated by slap orientation and capture technology in Figure 1. Tabular representations are enumerated in Table 1. Results are reported in milliseconds.

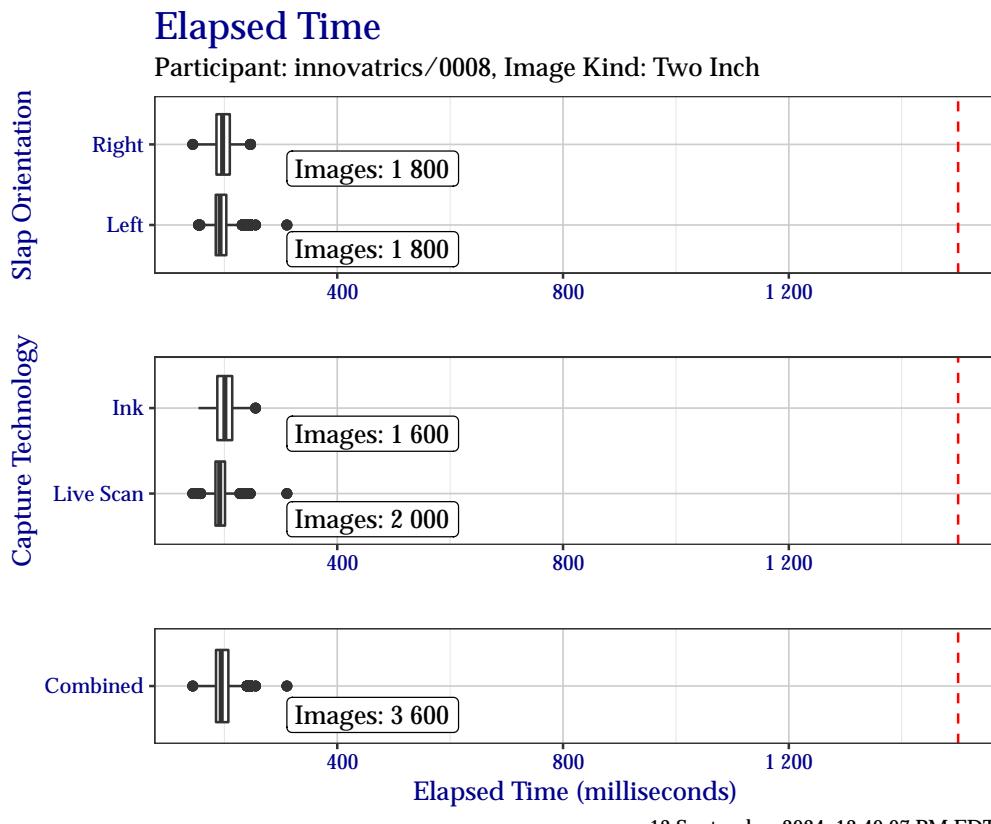

Figure 1: Box plots of elapsed time in milliseconds when segmenting the TwoInch timing test corpus, separated by slap orientation and capture technology.

Table 1: Elapsed time in milliseconds when segmenting the TwoInch timing test corpus, separated by slap orientation and capture technology.

	Right	Left	Live Scan	Ink	Combined
Minimum	144	154	144	154	144
25%	186	185	184	187	185
Median	197	192	192	201	194
75%	210	203	201	214	207
Maximum	246	311	311	255	311

2.2 Segmentation Centers and Dimensions

2.2.1 Segmentation Centers

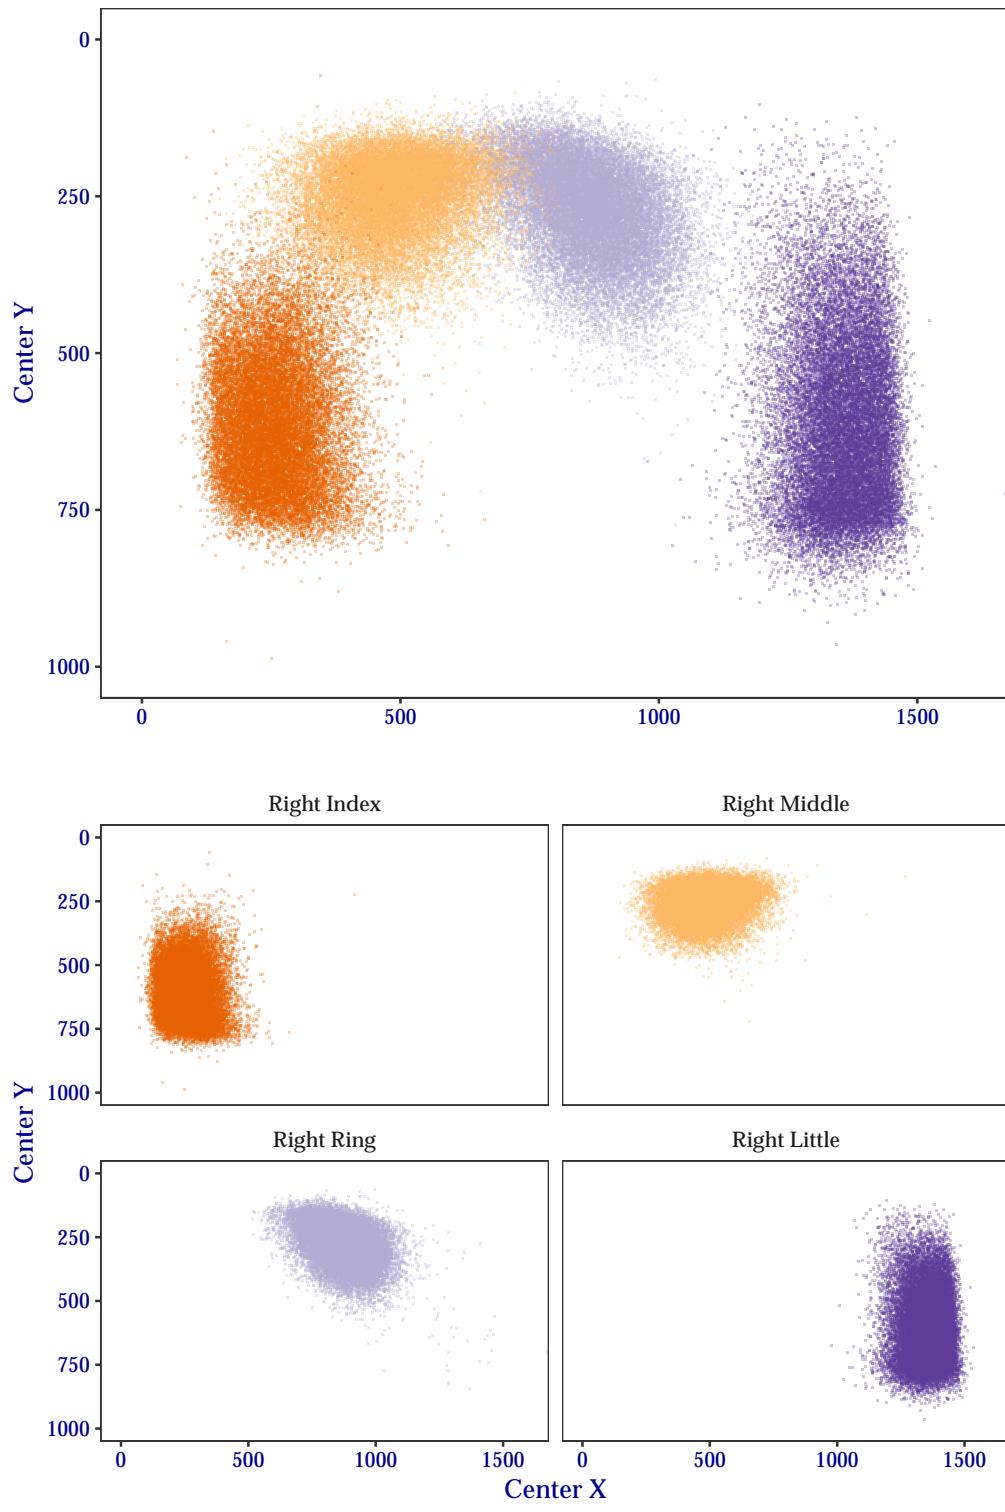

The plots in this section show the distribution of segmentation position centers (x, y) for TwoInch data. At the top of each figure is a combined plot for all finger positions of a given slap orientation. These figures are isolated in plots faceted at the bottom of the figure.

Plots of segmentation centers for the right hand TwoInch data are shown in Figure 2 and plots of segmentation centers for the left hand are shown in Figure 3. Blank lines that may appear in the plots are **not** rendering artifacts. Rather, they are indicative of image downsampling. Centers have been normalized to 500 pixels per inch.

Points in each plot are plotted with a semi-transparent opacity. This results in points of particular color appearing “darker” to indicate a higher frequency of the observed value, while “lighter” points indicate a lower observed frequency.

Figure 5: Segmentation position dimensions for left hand TwoInch data.

2.3 Detailed Segmentation Statistics

This section shows detailed results of segmentation of TwoInch data. Values in each table are the percentage that the variable in the left-most column was correctly segmented.

Each table has three columns of percentages. The *Standard Scoring* column shows the percentage of correctly-segmented positions based on the scoring metrics defined in the SlapSeg III scoring document. The *Ignoring Bottom Y* column shows how the percentage would change if the threshold for the *bottom Y* coordinate of the segmentation position was ignored. Similarly, the *Ignoring Bottom X and Y* columns shows how the percentage would change if only the top, left, and right sides of the segmentation position were considered. These two supplemental columns are included because it has traditionally been difficult to determine the exact location of the distal interphalangeal joint.

Table 2 shows how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 3 shows success for specific finger positions over the entire test corpus. Similarly, Table 4 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers on each slap image. Table 5 shows success for combinations of all fingers, Table 6 for just the index and middle fingers, and Table 7 for all except the little finger.

Table 2: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	98.6	98.7	99.4
2	97.9	98.1	98.7
3	97.0	97.3	98.0
4	94.0	94.9	96.4
5	84.7	85.6	89.0
6	81.2	82.3	85.5
7	74.7	77.4	81.2
8	57.4	64.2	68.5

Table 3: For all subjects, percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Index	81.3	85.5	86.2
Middle	87.5	88.3	89.9
Ring	87.8	88.6	89.8
Little	86.8	88.2	92.0
Left			
Index	89.0	90.8	91.7
Middle	91.4	92.0	93.6
Ring	91.2	92.3	93.6
Little	85.6	88.4	95.3

Table 4: Percentage that a particular type of fingerprint was correctly segmented on *Either* or *Both* hands. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Index			
Either	95.3	96.3	96.8
Both	71.2	75.8	77.0
Middle			
Either	97.0	97.3	97.8
Both	78.1	79.2	82.0
Ring			
Either	97.1	97.4	97.9
Both	78.5	80.1	82.1
Little			
Either	95.5	96.3	98.4
Both	72.8	76.1	84.7

Table 5: Percentage of segmentation success by hand for combinations of all eight fingers of a TwoInch slap. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Any	92.9	93.3	95.4
At Least Two	90.8	91.2	92.9
At Least Three	87.1	88.2	89.9
All Four	72.6	77.9	79.8
Left			
Any	95.6	96.0	97.9
At Least Two	93.9	94.3	96.0
At Least Three	90.4	91.5	93.9
All Four	77.4	81.7	86.3

Table 6: Percentage of segmentation success by hand when only considering combinations of index and middle fingers. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Either Index or Middle	90.6	91.1	92.6
Both Index and Middle	78.2	82.6	83.6
Left			
Either Index or Middle	94.1	94.4	95.6
Both Index and Middle	86.3	88.4	89.7

Table 7: Percentage of segmentation success by hand when only considering combinations of index, middle, and ring fingers. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Any	92.1	92.3	93.8
At Least Two	88.9	89.6	90.7
All Three	75.6	80.5	81.4
Left			
Any	95.2	95.4	96.5
At Least Two	92.7	93.1	94.5
All Three	83.7	86.6	88.0

2.4 Handling Troublesome Images

2.4.1 Capture Failures

Segmentation algorithms may refuse to process an image. This may happen for a technical reason (e.g., the algorithm cannot parse the image data), or for a practical reason (e.g., the hand in the image is placed incorrectly). These failure scenarios are the result of capturing improper image data. In these types of scenarios, it is important to examine the cause of the failure. With many live scan capture setups, segmentation is performed immediately after capture. If an algorithm can detect that it won't be able to segment an image due to a technical or practical issue, it can alert the operator to perform a recapture before the subject leaves.

The SlapSeg III API encourages algorithms to identify these failure reasons by specifying pre-defined *deficiencies* in the image. Algorithms should attempt segmentation even if an image deficiency is encountered if at all possible. Note that SlapSeg III *guarantees* well-formed image data, so failures to parse are **not** an indicator of the data provided.

Reasons for capture-type failures reported by innovatrics+0008 are enumerated in Table 8. Note that for TwoInch data, images are expected to be rotated, so a capture failure of *Rotation Detected* is unacceptable.

Table 8: Count of self-reported capture-type failure reasoning.

Failure Reason	Images
Request Recapture (Attempt)	44

In situations where the algorithm feels that the presented image should be recaptured (Table 8), one or more image deficiencies must be identified. These deficiencies are enumerated in Table 9. At this point, NIST does not have a groundtruth of image deficiencies, but plans to update this table with the accuracy of deficiency observations in the future.

Table 9: Count of image deficiencies reported when requesting a recapture.

Deficiency	Count
Incomplete	44

2.4.1.1 Recovery

When encountering a segmentation failure, SlapSeg III algorithms are encouraged to provide a *best-effort* segmentation when possible. In some cases, that best-effort may be correct, which reduces the amount of images that need to be manually adjudicated by an operator. The result of such best-effort segmentations are shown in Table 10.

Out of 44 recovery attempts innovatrics+0008 attempted 26 segmentations of fingers and skipped 150 fingers. More information about skipped fingers can be found in Table 11.

Table 10: Results of best-effort segmentation when innovatrics+0008 reported segmentation failure (26 best-effort attempts).

Standard	Ignoring Bottom Y	Ignoring Bottom X and Y
19.2	26.9	26.9

2.4.2 Segmentation Failures

Even if an algorithm accepts an image for processing, it can still fail to process one or more fingers from the image, regardless of if the algorithm requested a recapture and provided best-effort segmentation.

The SlapSeg III API allows algorithms to communicate reasons for failure to process these fingers. In some cases, the distal phalanx in question might not be present in the image due to amputation or being placed outside the platen's capture area. It is imperative that the segmentation algorithm correctly report this as failing to segment the correct friction ridge generalized position without disrupting the sequence of valid positions present in the image. This can help prompt an operator to recapture or record additional information about the subject.

In SlapSeg III, a number of images are missing fingers or otherwise have fingers that will not be able to be segmented. Reasons for segmentation failures reported by innovatrics+0008 are enumerated in Table 11.

Table 11: Count of self-reported segmentation failure reasoning.

Failure Reason	Fingers
Finger Not Found	682
Finger Not Found	150
Finger Found, but Can't Segment	0
Vendor Defined	0

2.4.3 Identifying Missing Fingers

A small portion of the test corpus in SlapSeg III are missing fingers. Table 12 shows how successful innovatrics+0008 was in correctly determining if a finger was missing. The *Missed* row shows when a segmentation position was returned for a missing finger. All possible failure reasons are enumerated, but are not considered *Correctly Identified* because the algorithm specified failure for a reason other than the finger not being found.

Table 12: Performance of innovatrics+0008 at detecting fingers missing from an image.

Result	Percentage
Missed	18.7
Correctly Identified	81.3
Other Failure: Finger Found, but Can't Segment	0.0
Other Failure: Vendor Defined	0.0
Other Failure: Segmentation Not Attempted	0.0

2.4.4 Sequence Error

Sequence error occurs when a fingerprint is segmented from an image but assigned an incorrect finger position (e.g., segmenting a right middle finger but labeling it a right index finger). Table 13 shows cases in which a segmentation position was returned that matched a ground truth segmentation position for a different finger in the same image.

Table 13: Percentage of images in the dataset where one or more segmentation positions correctly matched an incorrect finger position within the same image, indicating sequence error.

Hand	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Left	0.09	0.09	0.10
Right	0.12	0.12	0.14
Combined	0.11	0.11	0.12

2.5 Determining Orientation

An *optional* portion of the SlapSeg III API asked participants to determine the hand orientation of an image. Participants were provided the kind (e.g., Tenprint card) and capture technology (e.g., ink), and needed to determine whether the image was of the left or right hand.

Overall Two Inch accuracy: 99.6%

Table 14: Percentage of accuracy when determining hand orientation of a two inch image. The first column indicates the true hand orientation. Subsequent columns indicate the percentage of the time in which the indicated hand orientation was hypothesized.

	Left	Right
Left	99.7	0.3
Right	0.5	99.5

3 Identification Flats (“ThreeInch” Data)

3.1 Segmentation Timing

All algorithms are run over a small fixed corpus of ThreeInch images to estimate the total runtime of the evaluation. To be evaluated under SlapSeg III, algorithms **must** segment the timing corpus, on average, in under 1 500 milliseconds. This maximum reference time is documented in the SlapSeg III test plan, and is subject to change. Times are measured by running a single process on an isolated compute node equipped with an Intel Gold 6254 CPU (submissions received prior to February 2022 were timed with a Intel Xeon E5-4650 CPU).

Box plots of segmentation times are separated by hand in Figure 6, with tabular representations are enumerated in Table 15. Results are reported in milliseconds

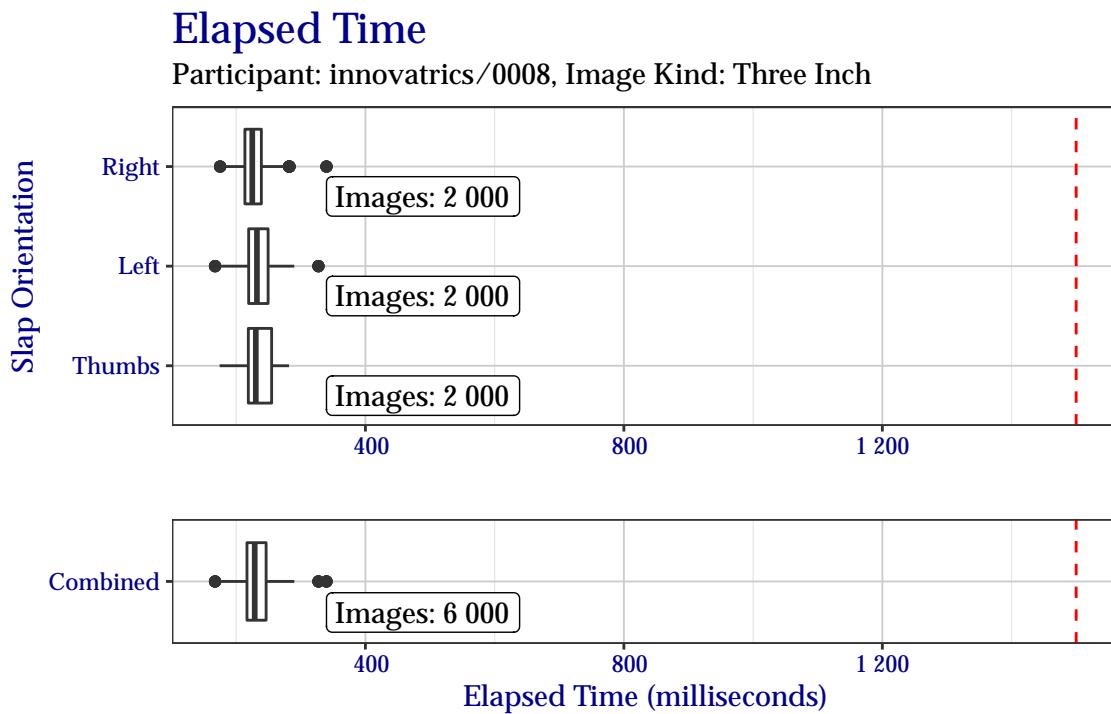

Figure 6: Box plots of elapsed time in milliseconds when segmenting the ThreeInch timing test corpus, separated by slap orientation.

Table 15: Elapsed time in milliseconds when segmenting the ThreeInch timing test corpus, separated by slap orientation.

	Right	Left	Thumbs	Combined
Minimum	175	167	174	167
25%	213	219	219	217
Median	225	232	230	229
75%	239	249	255	246
Maximum	340	327	282	340

3.2 Segmentation Centers and Dimensions

3.2.1 Segmentation Centers

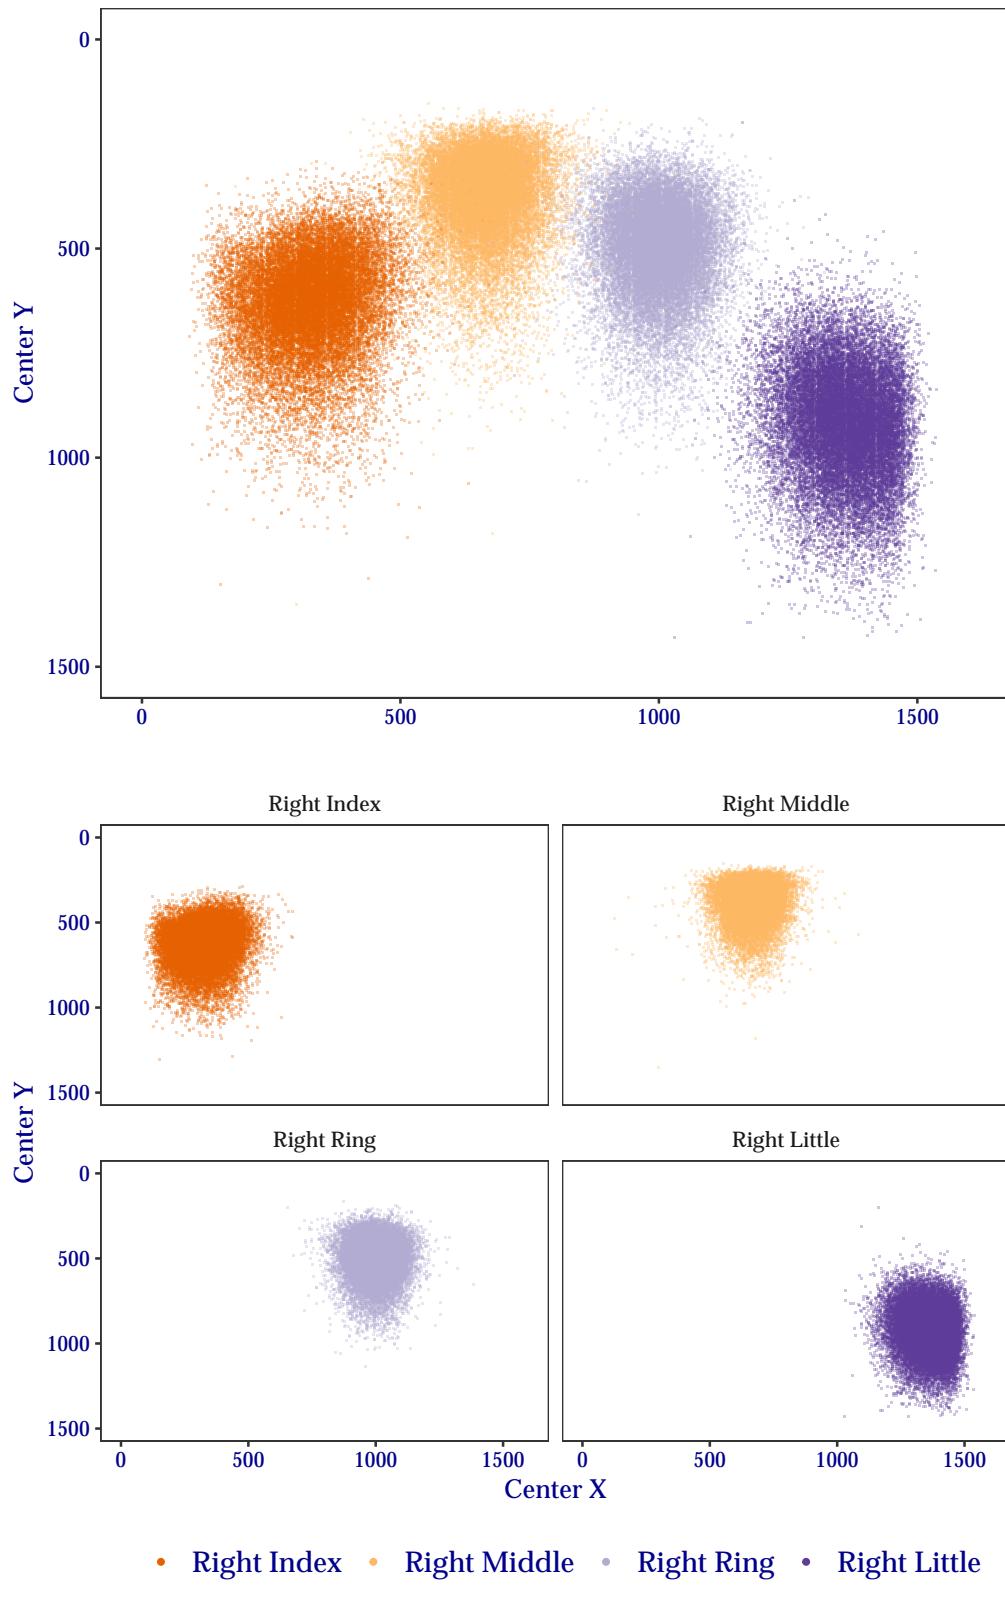

The plots in this section show the distribution of segmentation position centers (x, y) for ThreeInch data. At the top of each figure is a combined plot for all finger positions of a given hand orientation. These figures are isolated in plots faceted at the bottom of the figure.

Plots of segmentation centers for the right hand ThreeInch data are shown in Figure 7, for the left hand in Figure 8, and for thumbs in Figure 9. Blank lines that may appear in the plots are **not** rendering artifacts. Rather, they are indicative of image downsampling. Centers have been normalized to 500 pixels per inch.

Points in each plot are plotted with a semi-transparent opacity. This results in points of particular color appearing “darker” to indicate a higher frequency of the observed value, while “lighter” points indicate a lower observed frequency.

3.4 Handling Troublesome Images

3.4.1 Capture Failures

Segmentation algorithms may refuse to process an image. This may happen for a technical reason (e.g., the algorithm cannot parse the image data), or for a practical reason (e.g., the hand in the image is placed incorrectly). These failure scenarios are the result of capturing improper image data. In these types of scenarios, it is important to examine the cause of the failure. With many live scan capture setups, segmentation is performed immediately after capture. If an algorithm can detect that it won't be able to segment an image due to a technical or practical issue, it can alert the operator to perform a recapture before the subject leaves.

The SlapSeg III API encourages algorithms to identify these failure reasons by specifying pre-defined *deficiencies* in the image. Algorithms should attempt segmentation even if an image deficiency is encountered if at all possible. Note that SlapSeg III *guarantees* well-formed image data, so failures to parse are **not** an indicator of the data provided.

Reasons for capture-type failures reported by innovatrics+0008 are enumerated in Table 22.

Table 22: Count of self-reported capture-type failure reasoning.

Failure Reason	Images
Request Recapture (Attempt)	78

In situations where the algorithm feels that the presented image should be recaptured (Table 22), one or more image deficiencies must be identified. These deficiencies are enumerated in Table 23. At this point, NIST does not have a groundtruth of image deficiencies, but plans to update this table with the accuracy of deficiency observations in the future.

Table 23: Count of image deficiencies reported when requesting a recapture.

Deficiency	Count
Incomplete	78

3.4.1.1 Recovery

When encountering a segmentation failure, SlapSeg III algorithms are encouraged to provide a *best-effort* segmentation when possible. In some cases, that best-effort may be correct, which reduces the amount of images that need to be manually adjudicated by an operator. The result of such best-effort segmentations are shown in Table 24.

Out of 78 recovery attempts innovatrics+0008 attempted 67 segmentations of fingers and skipped 117 fingers. More information about skipped fingers can be found in Table 25.

Table 24: Results of best-effort segmentation when innovatrics+0008 reported segmentation failure (67 best-effort attempts).

Standard	Ignoring Bottom Y	Ignoring Bottom X and Y
67.2	67.2	74.6

3.4.2 Segmentation Failures

Even if an algorithm accepts an image for processing, it can still fail to process one or more fingers from the image, regardless of if the algorithm requested a recapture and provided best-effort segmentation.

The SlapSeg III API allows algorithms to communicate reasons for failure to process these fingers. In some cases, the distal phalanx in question might not be present in the image due to amputation or being placed outside the platen's capture area. It is imperative that the segmentation algorithm correctly report this as failing to segment the correct friction ridge generalized position without disrupting the sequence of valid positions present in the image. This can help prompt an operator to recapture or record additional information about the subject.

In SlapSeg III, a number of images are missing fingers or otherwise have fingers that will not be able to be segmented. Reasons for segmentation failures reported by innovatrics+0008 are enumerated in Table 25.

Table 25: Count of self-reported segmentation failure reasoning.

Failure Reason	Fingers
Finger Not Found	453
Finger Not Found	117
Finger Found, but Can't Segment	0
Vendor Defined	0

3.4.3 Identifying Missing Fingers

A small portion of the test corpus in SlapSeg III are missing fingers. Table 26 shows how successful innovatrics+0008 was in correctly determining if a finger was missing. The *Missed* row shows when a segmentation position was returned for a missing finger. All possible failure reasons are enumerated, but are not considered *Correctly Identified* because the algorithm specified failure for a reason other than the finger not being found.

Table 26: Performance of innovatrics+0008 at detecting fingers missing from an image.

Result	Percentage
Missed	35.8
Correctly Identified	64.2
Other Failure: Finger Found, but Can't Segment	0.0
Other Failure: Vendor Defined	0.0
Other Failure: Segmentation Not Attempted	0.0

3.4.4 Sequence Error

Sequence error occurs when a fingerprint is segmented from an image but assigned an incorrect finger position (e.g., segmenting a right middle finger but labeling it a right index finger). Table 27 shows cases in which a segmentation position was returned that matched a ground truth segmentation position for a different finger in the same image.

Table 27: Percentage of images in the dataset where one or more segmentation positions correctly matched an incorrect finger position within the same image, indicating sequence error.

Hand	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Left	0.10	0.10	0.11
Right	0.12	0.12	0.14
Thumbs	0.05	0.05	0.05
Combined	0.09	0.09	0.10

3.5 Determining Orientation

An *optional* portion of the SlapSeg III API asked participants to determine the hand orientation of an image. Participants were provided the kind (e.g., Identification Flat) and needed to determine whether the image was of the left hand, right hand, or thumbs.

Overall Three Inch accuracy: 85.0%

Table 28: Percentage of accuracy when determining hand orientation of a three inch image. The first column indicates the true hand orientation. Subsequent columns indicate the percentage of the time in which the indicated hand orientation was hypothesized.

	Left	Right	Thumbs
Left	99.5	0.5	0
Right	0.8	99.2	0
Thumbs	24.5	19.8	55.7

4 Upper Palm (“FiveInch” Data)

4.1 Segmentation Timing

All algorithms are run over a small fixed corpus of FiveInch images to estimate the total runtime of the evaluation. To be evaluated under SlapSeg III, algorithms **must** segment the timing corpus, on average, in under 1500 milliseconds. This maximum reference time is documented in the SlapSeg III test plan, and is subject to change. Times are measured by running a single process on an isolated compute node equipped with an Intel Gold 6254 CPU (submissions received prior to February 2022 were timed with a Intel Xeon E5-4650 CPU).

Box plots of segmentation times are separated by slap orientation in Figure 13. Tabular representations are enumerated in Table 29. Results are reported in milliseconds.

13 September 2024, 12:40:09 PM EDT

Figure 13: Box plots of elapsed time in milliseconds when segmenting the FiveInch timing test corpus, separated by slap orientation.

Table 29: Elapsed time in milliseconds when segmenting the FiveInch timing test corpus, separated by slap orientation.

	Right	Left	Combined
Minimum	512	531	512
25%	588	617	603
Median	615	647	636
75%	688	713	712
Maximum	780	815	815

4.2 Segmentation Centers and Dimensions

4.2.1 Segmentation Centers

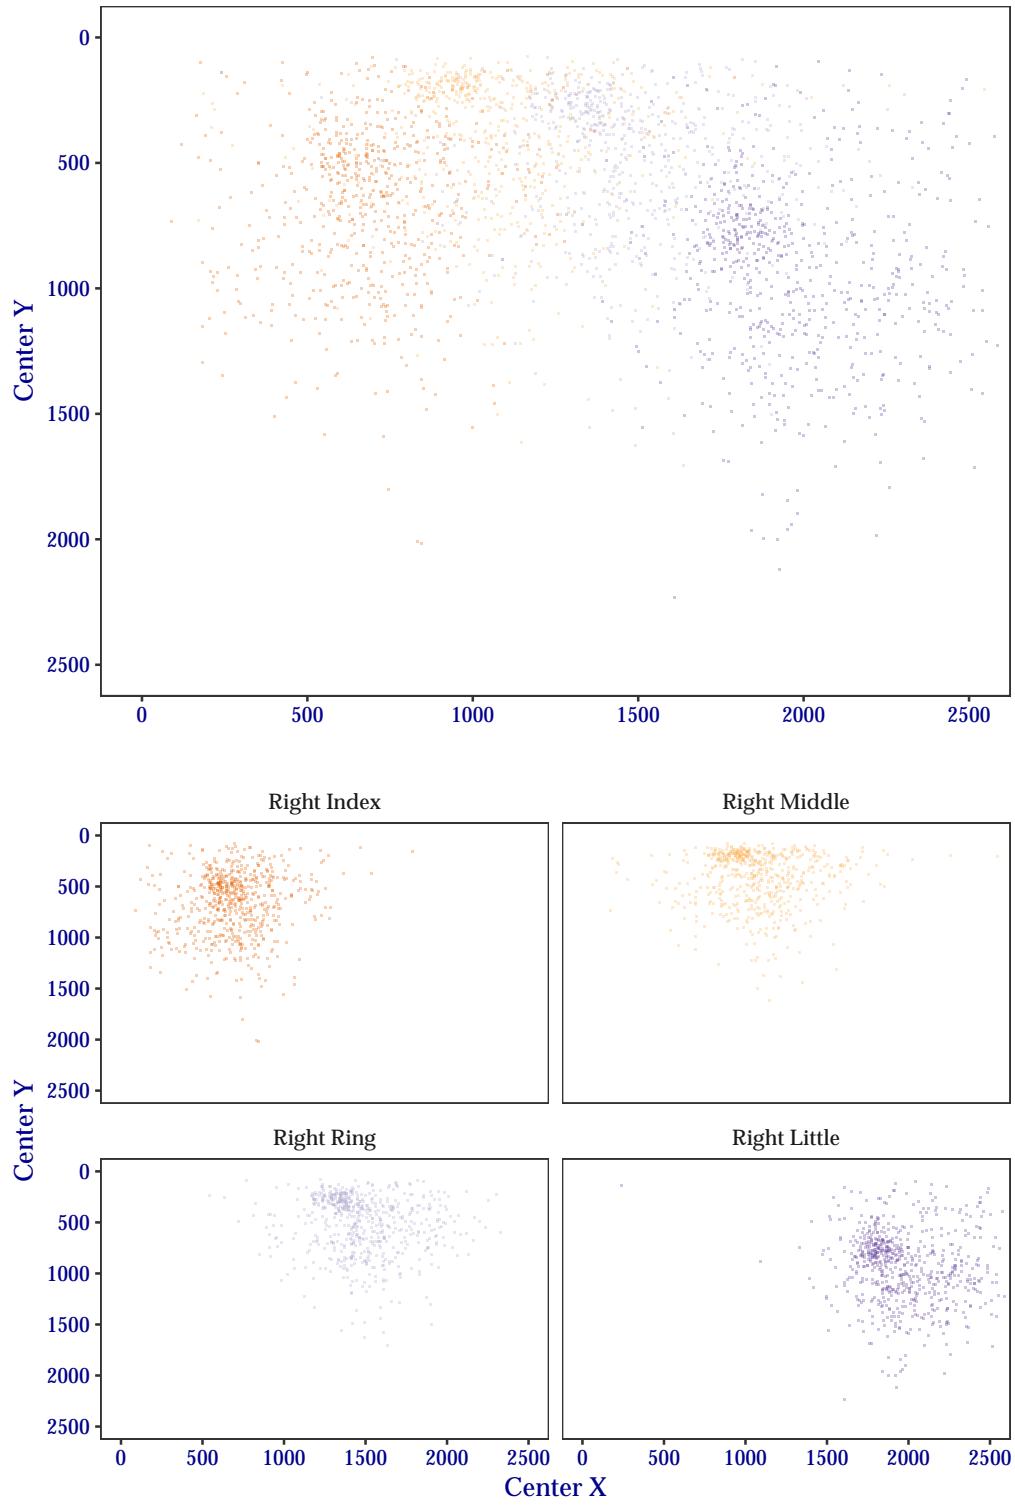

The plots in this section show the distribution of segmentation position centers (x, y) for FiveInch data. At the top of each figure is a combined plot for all finger positions of a given slap orientation. These figures are isolated in plots faceted at the bottom of the figure.

Plots of segmentation centers for the right hand FiveInch data are shown in Figure 14 and plots of segmentation centers for the left hand are shown in Figure 15. Blank lines that may appear in the plots are **not** rendering artifacts. Rather, they are indicative of image downsampling. Centers have been normalized to 500 pixels per inch.

Points in each plot are plotted with a semi-transparent opacity. This results in points of particular color appearing “darker” to indicate a higher frequency of the observed value, while “lighter” points indicate a lower observed frequency.

4.3 Detailed Segmentation Statistics

This section shows detailed results of segmentation of FiveInch data. Values in each table are the percentage that the variable in the left-most column was correctly segmented.

Each table has three columns of percentages. The *Standard Scoring* column shows the percentage of correctly-segmented positions based on the scoring metrics defined in the SlapSeg III scoring document. The *Ignoring Bottom Y* column shows how the percentage would change if the threshold for the *bottom Y* coordinate of the segmentation position was ignored. Similarly, the *Ignoring Bottom X and Y* columns shows how the percentage would change if only the top, left, and right sides of the segmentation position were considered. These two supplemental columns are included because it has traditionally been difficult to determine the exact location of the distal interphalangeal joint.

Table 30 shows how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 31 shows success for specific finger positions over the entire test corpus. Similarly, Table 32 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers on each slap image. Table 33 shows success for combinations of all fingers, Table 34 for just the index and middle fingers, and Table 35 for all except the little finger.

Table 30: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	100.0	100.0	100.0
2	99.9	99.9	99.9
3	99.1	99.1	99.2
4	98.2	98.3	98.3
5	95.5	96.0	96.3
6	90.6	91.0	91.6
7	78.5	80.2	81.8
8	50.7	53.0	55.7

Table 31: For all subjects, percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Index	89.6	89.6	89.8

4.4 Handling Troublesome Images

4.4.1 Capture Failures

Segmentation algorithms may refuse to process an image. This may happen for a technical reason (e.g., the algorithm cannot parse the image data), or for a practical reason (e.g., the hand in the image is placed incorrectly). These failure scenarios are the result of capturing improper image data. In these types of scenarios, it is important to examine the cause of the failure. With many live scan capture setups, segmentation is performed immediately after capture. If an algorithm can detect that it won't be able to segment an image due to a technical or practical issue, it can alert the operator to perform a recapture before the subject leaves.

The SlapSeg III API encourages algorithms to identify these failure reasons by specifying pre-defined *deficiencies* in the image. Algorithms should attempt segmentation even if an image deficiency is encountered if at all possible. Note that SlapSeg III *guarantees* well-formed image data, so failures to parse are **not** an indicator of the data provided.

Reasons for capture-type failures reported by innovatrics+0008 are enumerated in Table 36.

Table 36: Count of self-reported capture-type failure reasoning.

Failure Reason	Images
Request Recapture (Attempt)	204

In situations where the algorithm feels that the presented image should be recaptured (Table 36), one or more image deficiencies must be identified. These deficiencies are enumerated in Table 37. At this point, NIST does not have a groundtruth of image deficiencies, but plans to update this table with the accuracy of deficiency observations in the future.

Table 37: Count of image deficiencies reported when requesting a recapture.

Deficiency	Count
Incomplete	204

4.4.1.1 Recovery

When encountering a segmentation failure, SlapSeg III algorithms are encouraged to provide a *best-effort* segmentation when possible. In some cases, that best-effort may be correct, which reduces the amount of images that need to be manually adjudicated by an operator. The result of such best-effort segmentations are shown in Table 38.

Out of 204 recovery attempts innovatrics+0008 attempted 82 segmentations of fingers and skipped 746 fingers. More information about skipped fingers can be found in Table 39.

Table 38: Results of best-effort segmentation when innovatrics+0008 reported segmentation failure (82 best-effort attempts).

Standard	Ignoring Bottom Y	Ignoring Bottom X and Y
70.4	71.6	71.6

4.4.2 Segmentation Failures

Even if an algorithm accepts an image for processing, it can still fail to process one or more fingers from the image, regardless of if the algorithm requested a recapture and provided best-effort segmentation.

The SlapSeg III API allows algorithms to communicate reasons for failure to process these fingers. In some cases, the distal phalanx in question might not be present in the image due to amputation or being placed outside the platen's capture area. It is imperative that the segmentation algorithm correctly report this as failing to segment the correct friction ridge generalized position without disrupting the sequence of valid positions present in the image. This can help prompt an operator to recapture or record additional information about the subject.

In SlapSeg III, a number of images are missing fingers or otherwise have fingers that will not be able to be segmented. Reasons for segmentation failures reported by innovatrics+0008 are enumerated in Table 39.

5.4 Handling Troublesome Images

5.4.1 Capture Failures

Segmentation algorithms may refuse to process an image. This may happen for a technical reason (e.g., the algorithm cannot parse the image data), or for a practical reason (e.g., the hand in the image is placed incorrectly). These failure scenarios are the result of capturing improper image data. In these types of scenarios, it is important to examine the cause of the failure. With many live scan capture setups, segmentation is performed immediately after capture. If an algorithm can detect that it won't be able to segment an image due to a technical or practical issue, it can alert the operator to perform a recapture before the subject leaves.

The SlapSeg III API encourages algorithms to identify these failure reasons by specifying pre-defined *deficiencies* in the image. Algorithms should attempt segmentation even if an image deficiency is encountered if at all possible. Note that SlapSeg III *guarantees* well-formed image data, so failures to parse are **not** an indicator of the data provided.

Reasons for capture-type failures reported by innovatrics+0008 are enumerated in Table 50.

Table 50: Count of self-reported capture-type failure reasoning.

Failure Reason	Images
Request Recapture (Attempt)	51

In situations where the algorithm feels that the presented image should be recaptured (Table 50), one or more image deficiencies must be identified. These deficiencies are enumerated in Table 51. At this point, NIST does not have a groundtruth of image deficiencies, but plans to update this table with the accuracy of deficiency observations in the future.

Table 51: Count of image deficiencies reported when requesting a recapture.

Deficiency	Count
Incomplete	51

5.4.1.1 Recovery

When encountering a segmentation failure, SlapSeg III algorithms are encouraged to provide a *best-effort* segmentation when possible. In some cases, that best-effort may be correct, which reduces the amount of images that need to be manually adjudicated by an operator. The result of such best-effort segmentations are shown in Table 52.

Out of 51 recovery attempts innovatrics+0008 attempted 35 segmentations of fingers and skipped 169 fingers. More information about skipped fingers can be found in Table 53.

Table 52: Results of best-effort segmentation when innovatrics+0008 reported segmentation failure (35 best-effort attempts).

Standard	Ignoring Bottom Y	Ignoring Bottom X and Y
54.5	54.5	54.5

5.4.2 Segmentation Failures

Even if an algorithm accepts an image for processing, it can still fail to process one or more fingers from the image, regardless of if the algorithm requested a recapture and provided best-effort segmentation.

The SlapSeg III API allows algorithms to communicate reasons for failure to process these fingers. In some cases, the distal phalanx in question might not be present in the image due to amputation or being placed outside the platen's capture area. It is imperative that the segmentation algorithm correctly report this as failing to segment the correct friction ridge generalized position without disrupting the sequence of valid positions present in the image. This can help prompt an operator to recapture or record additional information about the subject.

In SlapSeg III, a number of images are missing fingers or otherwise have fingers that will not be able to be segmented. Reasons for segmentation failures reported by innovatrics+0008 are enumerated in Table 53.

Table 53: Count of self-reported segmentation failure reasoning.

Failure Reason	Fingers
Finger Not Found	422
Finger Not Found	169
Finger Found, but Can't Segment	0
Vendor Defined	0

5.4.3 Identifying Missing Fingers

A small portion of the test corpus in SlapSeg III are missing fingers. Table 54 shows how successful innovatrics+0008 was in correctly determining if a finger was missing. The *Missed* row shows when a segmentation position was returned for a missing finger. All possible failure reasons are enumerated, but are not considered *Correctly Identified* because the algorithm specified failure for a reason other than the finger not being found.

Table 54: Performance of innovatrics+0008 at detecting fingers missing from an image.

Result	Percentage
Missed	0.0
Correctly Identified	100.0
Other Failure: Finger Found, but Can't Segment	0.0
Other Failure: Vendor Defined	0.0
Other Failure: Segmentation Not Attempted	0.0

5.4.4 Sequence Error

Sequence error occurs when a fingerprint is segmented from an image but assigned an incorrect finger position (e.g., segmenting a right middle finger but labeling it a right index finger). Table 55 shows cases in which a segmentation position was returned that matched a ground truth segmentation position for a different finger in the same image.

Table 55: Percentage of images in the dataset where one or more segmentation positions correctly matched an incorrect finger position within the same image, indicating sequence error.

Hand	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Left	0.57	0.57	0.57
Right	0.23	0.23	0.23
Combined	0.40	0.40	0.40

5.5 Determining Orientation

An *optional* portion of the SlapSeg III API asked participants to determine the hand orientation of an image. Participants were provided the kind (e.g., full palm) and needed to determine whether the image was of the left or right hand.

Overall Full Palm accuracy: 93.9%

Table 56: Percentage of accuracy when determining hand orientation of a full palm image. The first column indicates the true hand orientation. Subsequent columns indicate the percentage of the time in which the indicated hand orientation was hypothesized.

	Left	Right
Left	94.6	5.4
Right	6.8	93.2

A Tenprint Cards (“TwoInch” Data)

A.1 Bootstrap Confidence for Segmentation Statistics

This section shows the same detailed results of segmentation of TwoInch data from Section 2.3, but with an added bootstrap confidence interval. For each observation, a bootstrap routine with 1 000 replicates was run, and a 95 % confidence interval extracted. The lower and upper confidence from that confidence interval are printed in each column within square brackets.

In Table 57, results are shown of how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 58 shows success for specific finger positions over the entire test corpus. Similarly, Table 59 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers in each slap image. Table 60 shows success for combinations of all fingers, Table 62 for the all except the little finger, and Table 61 for just the index and middle fingers.

Table 57: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	98.6 [98.4, 98.8]	98.7 [98.5, 98.9]	99.4 [99.3, 99.5]
2	97.9 [97.7, 98.2]	98.1 [97.8, 98.3]	98.7 [98.5, 98.9]
3	97.0 [96.7, 97.2]	97.3 [97.0, 97.5]	98.0 [97.8, 98.3]
4	94.0 [93.6, 94.5]	94.9 [94.5, 95.3]	96.4 [96.0, 96.7]
5	84.7 [84.0, 85.3]	85.6 [85.0, 86.2]	89.0 [88.5, 89.5]
6	81.2 [80.5, 81.8]	82.3 [81.6, 83.0]	85.5 [84.9, 86.1]
7	74.7 [74.0, 75.5]	77.4 [76.7, 78.1]	81.2 [80.5, 81.9]
8	57.4 [56.6, 58.3]	64.2 [63.4, 65.0]	68.5 [67.6, 69.3]

Table 58: For all subjects, Percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y

B Identification Flats (“ThreeInch” Data)

B.1 Bootstrap Confidence for Segmentation Statistics

This section shows the same detailed results of segmentation of ThreeInch data from Section 3.3, but with an added bootstrap confidence interval. For each observation, a bootstrap routine with 1 000 replicates was run, and a 95 % confidence interval extracted. The lower and upper confidence from that confidence interval are printed in each column within square brackets.

In Table 68, results are shown of how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 69 shows success for specific finger positions over the entire test corpus. Similarly, Table 70 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers in each slap image. Table 71 shows success for combinations of all fingers, Table 73 for the all except the little finger, and Table 72 for just the index and middle fingers.

Table 68: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	99.6 [99.5, 99.7]	99.6 [99.5, 99.7]	99.9 [99.8, 99.9]
2	98.9 [98.8, 99.0]	98.9 [98.8, 99.0]	99.4 [99.3, 99.5]
3	98.2 [98.0, 98.4]	98.2 [98.1, 98.4]	98.5 [98.3, 98.6]
4	97.4 [97.2, 97.6]	97.4 [97.2, 97.6]	98.2 [98.0, 98.3]
5	95.0 [94.7, 95.2]	95.0 [94.7, 95.3]	95.9 [95.7, 96.2]
6	93.1 [92.7, 93.4]	93.1 [92.8, 93.4]	95.9 [95.6, 96.1]
7	88.6 [88.2, 89.0]	88.7 [88.3, 89.1]	95.8 [95.5, 96.0]
8	80.0 [79.5, 80.5]	80.2 [79.7, 80.7]	95.3 [95.0, 95.6]
9	62.7 [62.1, 63.2]	63.2 [62.6, 63.8]	93.1 [92.8, 93.5]
10	35.0 [34.4, 35.5]	35.9 [35.3, 36.5]	82.4 [81.9, 82.8]

Table 69: For all subjects, Percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Thumb	84.5 [84.0, 84.9]	85.1 [84.6, 85.5]	96.1 [95.9, 96.4]

C Upper Palm (“FiveInch” Data)

C.1 Bootstrap Confidence for Segmentation Statistics

This section shows the same detailed results of segmentation of FiveInch data from Section 4.3, but with an added bootstrap confidence interval. For each observation, a bootstrap routine with 1 000 replicates was run, and a 95 % confidence interval extracted. The lower and upper confidence from that confidence interval are printed in each column within square brackets.

In Table 79, results are shown of how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 80 shows success for specific finger positions over the entire test corpus. Similarly, Table 81 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers in each slap image. Table 82 shows success for combinations of all fingers, Table 84 for the all except the little finger, and Table 83 for just the index and middle fingers.

Table 79: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	100.0 [100.0, 100.0]	100.0 [100.0, 100.0]	100.0 [100.0, 100.0]
2	99.9 [99.6, 100.0]	99.9 [99.6, 100.0]	99.9 [99.6, 100.0]
3	99.1 [98.3, 99.6]	99.1 [98.4, 99.6]	99.2 [98.6, 99.7]
4	98.2 [97.1, 99.1]	98.3 [97.4, 99.1]	98.3 [97.4, 99.1]
5	95.5 [93.9, 97.0]	96.0 [94.6, 97.4]	96.3 [94.9, 97.6]
6	90.6 [88.5, 92.8]	91.0 [88.9, 93.1]	91.6 [89.6, 93.4]
7	78.5 [75.5, 81.3]	80.2 [77.2, 83.3]	81.8 [78.9, 84.6]
8	50.7 [47.3, 54.1]	53.0 [49.4, 56.3]	55.7 [52.2, 59.2]

Table 80: For all subjects, Percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Index	89.6 [87.4, 91.8]	89.6 [87.4, 91.6]	89.8 [87.5, 91.9]
Middle	91.4 [89.4, 93.5]	91.8 [89.9, 93.8]	93.4 [91.6, 95.1]
Ring	93.5 [91.6, 95.2]	94.4 [92.7, 96.0]	94.9 [93.4, 96.4]
Little	89.5 [87.2, 91.6]	89.8 [87.5, 91.8]	90.3 [88.3, 92.3]

D Full Palm (“EightInch” Data)

D.1 Bootstrap Confidence for Segmentation Statistics

NOTE: The following segmentation statistics are based on a limited subset (approximately 15%) of the anticipated Full Palm dataset. This analysis will be updated as soon as NIST can obtain the remainder of the dataset.

This section shows the same detailed results of segmentation of EightInch data from Section 5.3, but with an added bootstrap confidence interval. For each observation, a bootstrap routine with 1 000 replicates was run, and a 95 % confidence interval extracted. The lower and upper confidence from that confidence interval are printed in each column within square brackets.

In Table 90, results are shown of how successful innovatrics+0008 segmented fingers for each subject in the test corpus. Table 91 shows success for specific finger positions over the entire test corpus. Similarly, Table 92 shows success for segmenting the same finger position from both hands.

The remainder of the tables show success per subject when considering combinations of subsets of the fingers in each slap image. Table 93 shows success for combinations of all fingers, Table 95 for the all except the little finger, and Table 94 for just the index and middle fingers.

Table 90: For each subject, the percentage that at least *Number of Fingers* fingers were correctly segmented, regardless of hand, for a maximum of eight correctly-segmented fingers. In *Standard Scoring*, scoring rules are followed exactly. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Number of Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
1	100.0 [100.0, 100.0]	100.0 [100.0, 100.0]	100.0 [100.0, 100.0]
2	99.7 [99.2, 100.0]	99.7 [99.3, 100.0]	99.7 [99.2, 100.0]
3	99.7 [99.2, 100.0]	99.7 [99.2, 100.0]	99.7 [99.2, 100.0]
4	99.2 [98.6, 99.8]	99.3 [98.7, 99.8]	99.3 [98.7, 99.8]
5	97.6 [96.4, 98.5]	97.7 [96.7, 98.6]	97.8 [96.8, 98.7]
6	96.2 [94.8, 97.4]	96.3 [95.1, 97.5]	96.4 [95.2, 97.6]
7	91.5 [89.5, 93.2]	91.5 [89.4, 93.3]	92.4 [90.8, 94.1]
8	73.8 [70.8, 76.6]	74.9 [71.8, 77.7]	76.6 [73.8, 79.3]

Table 91: For all subjects, Percentage that a particular friction ridge generalized position was correctly segmented. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Finger	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Right			
Index	92.6 [90.9, 94.4]	92.8 [90.9, 94.5]	93.0 [91.4, 94.7]
Middle	95.5 [94.1, 96.8]	95.5 [94.1, 96.9]	95.9 [94.5, 97.1]
Ring	96.9 [95.7, 97.9]	97.2 [96.1, 98.2]	97.6 [96.6, 98.5]
Little	94.1 [92.4, 95.7]	94.4 [92.9, 95.9]	94.6 [93.0, 96.1]
Left			
Index	92.9 [91.3, 94.5]	93.0 [91.3, 94.6]	93.0 [91.1, 94.6]
Middle	95.6 [94.3, 97.0]	95.6 [94.3, 97.0]	95.6 [94.1, 97.0]
Ring	95.5 [94.0, 96.9]	95.7 [94.4, 97.0]	96.4 [95.2, 97.6]
Little	94.4 [92.9, 95.9]	94.8 [93.2, 96.3]	95.7 [94.4, 97.0]

Table 92: Percentage that a particular type of fingerprint was correctly segmented on *Either* or *Both* hands. In *Ignoring Bottom Y*, the bottom left and bottom right Y coordinates are ignored. *Ignoring Bottom X and Y* only checks the locations of the top left and top right coordinates. Values in square brackets represent a 95 % confidence interval after bootstrapping with 1 000 replicates.

Fingers	Standard Scoring	Ignoring Bottom Y	Ignoring Bottom X and Y
Index			
Either	98.5 [97.7, 99.2]	98.6 [97.8, 99.3]	98.6 [97.7, 99.3]
Both	87.0 [84.6, 89.1]	87.1 [84.7, 89.4]	87.4 [84.8, 89.5]
Middle			
Either	98.7 [97.9, 99.4]	98.7 [97.9, 99.4]	98.7 [97.9, 99.4]
